Each company's return is measured from its own inclusion date — never from before it entered the global model portfolio — and is benchmarked against its own market's leading index in local currency. United States returns include reinvested dividends; international selection returns are price-based and do not include dividends.

Key dates: global model portfolio inception February 2026 (first selections, from Q4-2025 data) · latest quarterly review May 2026 (from Q1-2026 data) · companies entered at the February 2026 inception or the May 2026 review, as shown in the Selected column · each company's performance is measured from its own inclusion date.

Return since selection — current global selection (weighted)	BARAKA Invest selection	Local benchmarks (weighted blend)	Relative
Selections since their own entry dates	+0.2%	-1.5%	-1.9%

Each company is measured against its own market's index; the blend weights those local benchmark returns by model weight. A dash means the market's own index series is not yet wired (Kuwait, Qatar and Dubai — pending their real local indices; their pooled record is measured against TASI).

The table compounds each market's completed selection cycles for this sector on an equal-amount basis; a window in which a market's algorithm selected no qualifying name in this sector is modeled as cash (flat) for that window. Completed cycles only, so the periods differ from the since-selection figures above; the headline track record in each market's own report additionally extends through the current open cycle. Cycle counts and spans vary with each market's filing history (United Kingdom cycles are semi-annual), and windows are not always contiguous calendar quarters, so figures are not directly comparable across markets and are deliberately not combined. Track-record cycles include reinvested dividends where total-return data is available, as described under Important Information. Full detail is in each market's BARAKA Invest Sector Report.

Kuwait cycle history is measured within the pooled GCC Country Group (shown against TASI, the pooled group's stated benchmark).

Dubai cycle history is measured within the pooled GCC Country Group (shown against TASI, the pooled group's stated benchmark).

General Notes

This report presents the BARAKA Invest global selection at its model weights (15 markets). In every market, the global selection contains exactly the companies selected by that market's own BARAKA Invest process — inclusion is identical to the corresponding per-market reports; no selection is excluded. Weights are assigned by BARAKA Invest's systematic allocation methodology, subject to diversification caps at the company, industry and market level; sizing differentiates, it never removes a selection. Specific weighting mechanics and parameters are proprietary. Selections are reviewed quarterly and may enter or exit at each review. Company deep dives, cycle-by-cycle selection detail and entry/exit marks for every name in this report are published in the corresponding market's BARAKA Invest Industry Report; selection-level context is published in the BARAKA Invest Global Model Portfolio Report.

Backtested & past performance

Performance shown for periods prior to February 2026 is hypothetical and backtested. It reflects the application of the current investment methodology to historical market data and does not represent actual trading or client accounts. Backtested results are prepared with the benefit of hindsight and have inherent limitations. They do not reflect the impact of actual investment decision-making, market liquidity, transaction costs, taxes, slippage, or investor behavior, except where expressly stated. Actual investment results may differ materially. Performance from February 2026 onward reflects live model (paper) tracking of the published selections under the BARAKA Invest methodology. Unless otherwise indicated, model portfolios are rebalanced quarterly; track-record cycles are presented on an equal-weighted basis, and current-selection figures use actual model weights, as labelled in each section. Returns include reinvested dividends where total-return data is available — all United States figures and international track-record cycles; live-selection (model) returns for international markets and pooled GCC figures are price-based and do not include dividends. All returns exclude taxes, advisory fees, and investor-specific transaction costs unless otherwise stated. Past performance, whether actual or simulated, is not a reliable indicator of future results. Losses, including loss of principal, are possible.
